All the participants were got benefited through this webinar series FDP.

## 2. BACKGROUND OF THE SEMINAR

The corona virus outbreak came to light on December 31, 2019when china informed the world health organization of a cluster of cases of pneumonia of an unknown cause in Wuhan city Hubei province. Subsequently the disease spread to more provinces in china, and to the rest of the world. The WHO has now declared it a pandemic. The virus has been named SARS COV-2 and the disease is now called as COVID-19.

The COVID-19 pandemic was confirmed in the Indian union territory of Delhi, with the firt case reported on 2 March 2020. The total of infected people reported as on 30 June 2020is 87,360 consisting of 2.742 deaths and 58.348 recovery.

Since the COVID -19 pandemic has disrupted the normal lifestyle of people across the globe, the virtual world has come to the rescue. Amongst many institutions schools have also shifted their base to virtual platforms to conduct classes online. Consequently, catering to the needs of all stages of education from pre-primary to university level, online education has emerged as an alternative to ordinary face to face classes. Accordingly, various stakeholders such as government and private organizations are trying their best to assist each other by sprucing up their existing online platforms, apps and providing training to teachers to use these apps and platforms to the optimum level. Moreover, efforts are being made by both government and non-government organizations and edtech companies to support the school system to make a smooth transition to the virtual world. Up skilling and motivating teachers, organizing counseling sessions for stakeholders such as teachers, parents and students are some of the important measures taken by the administration in the recent past. Making a continuous effort to provide customized teaching-learning material suitable for online classes

Students and teachers also have their own struggles while accessing these online platforms. Due to financial constraints, students are not able to access the internet, and are devoid of electronic gadgets and laptop, phone or computer or even radio and TV. Those students who have facilities to attend to online classes face barriers in terms of unavailability of physical space, which is equally applicable to teachers who are supposed to conduct online classes from their home. There are also social barriers such as discrimination against girls as they are expected to do household chores instead of attending online classes in the mornings. In rural areas, boys are often expected to work on the family farmlands. In homes where TV and radio are available, the question of who has control over these gadgets is important. Most of the time, girls are not allowed to watch educational programmes.
# 3. AIMS AND OBJECTIVES

- To understand how existing organizational skills must change when engaged in remote work
- To appreciate the challenges of communicating across cultures
- To develop virtual work capabilities based on leading research and practice on remote interaction and computer mediated communication
- To enhance students' ability to make effective decisions about leading and participating in virtual work structures
